

**Prospective Memory Abilities while Driving in Adults with an Autism Spectrum Disorder**

Veerle Ross, Giovanni Vanroelen, Ellen M. M. Jongen, Tom Brjls, Altgassen A. Mareike, Karin Van Vlierden, Martijn van Beers, Robert A. C. Ruifer, Geert Wets, Kris Brjls

**Driving: complex & goal-oriented**

Different tasks

- Parallel
- Switching
- E.g., shifting, steering, changing lanes, ...

With risk of distraction

- Passenger
- Phone
- ...

**Driving: complex & goal-oriented**

Unknown routes and complex driving environments

**Driving: complex & goal-oriented**

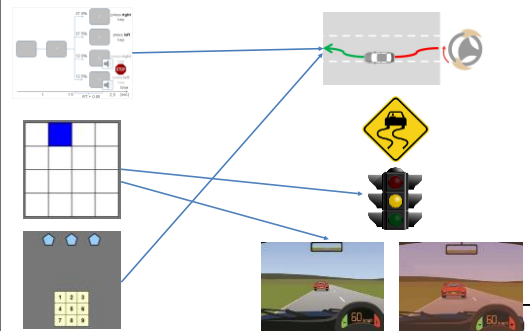

Sudden changes in the environment  
E.g., traffic density, weather conditions

Driving → dependent on executive functioning (EF)

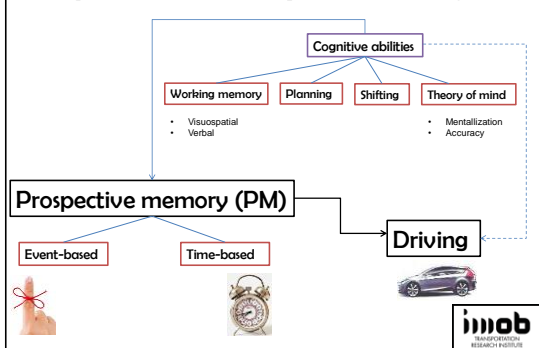

**Example: study of young novice drivers**

Source: ROSS, Veerle; JONGEN, Ellen; BRJLS, Tom; BRJLS, Kris; Ruifer, R.A. & WETS, Geert (2015) The relation between cognitive control and risky driving in young novice drivers. In: APPLIED NEUROPSYCHOLOGY ADULT, 22 (1), p. 61-72.

**Prospective memory and driving**

## Prospective memory in ASD

Conflicting results

Agreement of time-based PM (TBPM) difficulties

Disagreement of event-based PM (EBPM) difficulties

Could be related to EF difficulties in ASD

Important to use real-life/naturalistic" studies → driving!

## Driving simulation

## Pilot study objectives

1. Translate typical PM task to simulated driving in ASD
  - a. Age differences?
  - b. Underlying EF functions?
2. Do outcome measures of the PM task predict more naturalistic PM situations?

## Participants

Young adults and adults (18-62)

Matched groups

ASD

- N= 19
- 11 males, 8 females
- Mean age= 33

Control

- N= 20
- 10 males, 10 females
- Mean age= 33

## Driving scenarios

Drive 1: Typical PM task

- 4 EBPM (e.g., change a tier at the ALDI)
- 2 TBPM (e.g., indicate when 5min. passed)
- Measures: EBPM distance, TBPM time

Drive 2: Naturalistic PM situations

- 2 EBPM
  - Exit
  - Red light in school zone
  - Measure dependent on situation
- 2 TBPM
  - Missed call
  - Route information
  - Measure: TBPM time

## Executive functioning tasks

Test battery of EF tasks

Only include significant correlates (power)

### Preliminary analyses and results

Drive 1: typical PM task

All intentions remembered correctly?

- EBPM: ASD & control ✓
- TBPM: ASD 79% & control 88%

Difference in timing of stated intention? ✗

### Drive 1: typical PM task

Planning and working memory?

### Remembering a call and asking route info

Source	F	Sig.	Partial Eta Squared
Group	2,673	0,113	0,084
Drive1_EBPM_distance	0,352	0,557	0,012
Drive1_TBPM_time	9,959	0,004	0,256
Group * Drive1_EBPM_distance	1,835	0,186	0,060
Group * Drive1_TBPM_time	0,150	0,701	0,005

### Discussion and limitations

- Further analyses required (e.g., more data cleaning)
- Often reversed relations (e.g., planning)
- Further studies focus on TBPM
  - Need for investigation underlying mechanisms
- Short time spans for TBPM
- Cues EBPM
  - Difficult to control when they notice it
  - Very salient cues
- Researcher present in the room
