The authors regret that the lower portion of Fig. 3 (Predictor–outcome effect matrix) was inadvertently cropped in the published version of the article. As a consequence, the x-axis of the figure, which displays the four outcome variables — Overtime Hours, Absenteeism Rate, Turnover Rate, and Patient Fall Rate — together with the accompanying axis label “Outcomes”, was not visible to readers. The corrected version of Fig. 3, in which the full x-axis and figure note are

displayed, is provided below and replaces the version published in the original article.

This correction concerns the visual presentation of Fig. 3 only. The underlying data, statistical analyses, results, interpretation, and conclusions reported in the article remain unchanged.

The authors would like to apologise for any inconvenience caused.

Fig. 3. Predictor-outcome effect matrix.
Note: Bubble size = standardised effect size | green = positive effects (reducing outcomes), red = negative effects (increasing outcomes), grey = not selected in stage 1.
SD = standard deviation; FTE = full time equivalents.
